

Forklift Fork Positioner

Forklift Fork Positioner - A fork positioner is a tool made out of high quality materials designed to withstand the most demanding procedures and work environments. This particular piece of equipment could enable the person driving to be able to operate the blades hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the entire load or the arms in order to facilitate much more accurate carrying and position in a faster and much more efficient way.

The fork pocket is quite unique and can enable the one operating it to securely sway the forks into position without any fear of destroying the positioning cylinders. This can allow the driver the alternative to be able to perform simultaneous or independent fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into blade positioners on existing units.
